Complete User Journeys

Detailed Workflows for All User Types

Document Version: 6.0

Last Updated: January 2026

Table of Contents

[Table of Contents will be generated when opened in Word]

Overview: Payment and Transaction Model

Platform Integration: TAMM (Government Business Portal)

CarDeal integrates with TAMM (Traffic and Automobile Management Marketplace), the Saudi Arabian government portal for business vehicle transactions, enabling a fully digital, secure, and legally compliant transaction flow.

Key TAMM Capabilities:

- Vehicle Verification: Automatic extraction of registration data, accident history, and inspection status
- Ownership Transfer API: Legal transfer processing with automatic insurance and violation verification
- Digital Contracts: Legally binding electronic contracts signed within the CarDeal interface
- Instant Processing: Near-instant transfer once all legal requirements are met

Platform Payment Flow (All Transactions)

Stage 1 - Commitment/Listing Fees

- Sellers pay listing fee of 99 SAR (non-refundable) + Mojaz report extraction fee
- Market buyers pay commitment fee: 0.5% of vehicle price (minimum 199 SAR, non-refundable)
- Request buyers pay search fee (non-refundable, fixed amount based on vehicle value: 500 SAR for vehicles under 100K SAR, 0.5% for vehicles over 100K SAR)

Stage 2 - Full Transaction Payment

When buyer and seller agree on final price:

Step 1: Buyer Pays Full Amount via CarDeal Platform

- Vehicle price (example: 80,000 SAR)
- Broker commission (example: 1,600 SAR at 2%)
- Platform fee (example: 400 SAR at 0.5%)
- Total: 82,000 SAR

Step 2: All Funds Held in CarDeal Escrow Account

- Partnership with Saudi bank - fully secure
- Fund status: Locked - no party can access

Step 3: CarDeal Triggers TAMM API for Ownership Transfer

- Verifies buyer has valid insurance
- Verifies no unpaid violations
- Processes legal ownership transfer
- Creates digital contract (signed by both parties)

Step 4: Buyer Confirms Receipt + TAMM Confirms Transfer - Funds Released

- Seller receives: 80,000 SAR → Seller's IBAN account
- Broker receives: 1,600 SAR → Broker's wallet
- Platform retains: 400 SAR

Alternative Flow: Direct Transaction with Broker Facilitation

- Broker arranges in-person/online meeting between buyer and seller
- They complete transaction using Absher (for individuals) or through dealership
- Broker handles vehicle delivery if buyer and seller are in different cities
- CarDeal holds only broker commission in escrow (not full vehicle price)
- Commission released after both parties confirm completion

Note: The platform offers both options - buyers can choose full escrow or direct transaction with broker facilitation.

Fee Structure

Fee Type	Details
1. Listing Fees	Seller listing fee: 99 SAR (one-time, non-refundable) + Mojaz report fee
2. Commitment Fees	Market buyer commitment: 0.5% of vehicle price (minimum 199 SAR per

	inquiry, non-refundable) Request buyer search fee: Fixed amount (one-time, non-refundable: 500 SAR for vehicles <100K, 0.5% for vehicles ≥100K)
3. Transaction Commissions	Broker commission: 0.5% - 3% of vehicle sale price (broker sets percentage) Platform commission: 0.5% of vehicle sale price Total commission: 1% - 3.5% of vehicle sale price
4. Ownership Transfer Service (Optional)	Individual Brokers: Broker service fee 100-400 SAR (broker sets within range) + Platform fee 50 SAR = Total 150-450 SAR Dealerships: Dealership service fee 400 SAR (fixed, matches market standards) + Platform fee 100 SAR = Total 500 SAR

Rationale: Dealerships offer more comprehensive service with standardized processes, justifying the fixed price that matches current market standards.

Seller Journey

Phase 1: Data Entry and Account Creation

Step 1: Complete Comprehensive Vehicle Form

- Detailed specifications (manufacturer, model, year, mileage, etc.)
- Geographic location
- VIN (Vehicle Identification Number)
- Vehicle condition assessment form
- Willingness for vehicle inspection (conditional)

Step 2: Account Verification

When clicking "Submit to Brokers":

- System checks for existing account
- If no account: Must create account via Nafath (National Single Sign-On) verification
- Identity verification required before proceeding

Phase 2: Payment and Report Extraction

Step 1: Payment

- Seller redirected to payment page
- Fees: 99 SAR (one-time, non-refundable) + Mojaz report extraction fee

Step 2: Automatic Report Retrieval After Successful Payment

- System automatically extracts comprehensive vehicle report from Mojaz platform
- Report includes: ownership history, accident history, maintenance records, insurance claims, outstanding fines, lien status, inspection history
- Report saved and made available to brokers and final buyer
- System also pulls data via TAMM for additional verification

Phase 2.5: Blockchain Registration (Automatic)

Step 1: Create Digital Vehicle Record

- Once payment succeeds and Mojaz report is extracted, the system automatically creates a permanent digital record of the vehicle on the blockchain
- Record includes: VIN hash, vehicle specifications, listing date, seller information (hashed), Mojaz report hash, initial mileage reading

- This creates an immutable, verifiable history that begins from the moment of listing
- The "Blockchain Verified" badge appears automatically on the listing

Step 2: Continuous Blockchain Updates

- Every significant event is automatically recorded on blockchain: inspections, viewings, price changes, offers, final sale
- Mileage is recorded at each verification point to prevent odometer fraud
- All photos and documents are hashed and their fingerprints stored on blockchain
- Creates complete, tamper-proof vehicle history

Phase 3: Broker Engagement

Step 1: Smart Distribution

System sends listing to qualified brokers:

- Filtered by same city/region as vehicle
- Filtered by specialization (if any)
- Listing sent to all brokers
- Response window: 24 hours

Step 2: Brokers Review and Propose

Each broker reviews:

- Complete vehicle specifications
- Mojaz report
- Blockchain history (if vehicle was previously listed)
- Reference pricing (government Marjea valuation, AI prediction)

Each broker proposes:

- Expected selling price (what they believe they can sell it for)
- Estimated days to complete sale
- Commission percentage (0.5% - 3%)

Phase 4: Broker Selection and Pricing

Step 1: Review All Proposals

Platform displays comprehensive comparison showing for each broker:

- Broker name and level (Beginner/Intermediate/Expert/Exceptional)
- Response time
- Customer ratings
- Service Level Agreement (SLA)
- Average time to complete sale
- Commission percentage
- Proposed selling price
- Estimated days to sale
- Blockchain reputation score (transactions completed, ratings received)

Step 2: Reference Pricing (Three Sources)

- Official Marjea valuation from government platform
- AI agent price recommendation (specific to Saudi market)
- Average of all broker proposals

Step 3: Select Broker and Set Price

- Seller chooses preferred broker
- Seller sets final asking price
- Constraint: Price cannot exceed broker's maximum proposed price
- This becomes the initial listing price

Phase 5: Communication Channels

Automatic Actions

- All listing information transferred to selected broker
- Direct communication channel opened
- Broker receives blockchain access to track all vehicle events

Seller Communication Options

Option A: Share personal contact information (phone, WhatsApp)

Option B: Use only platform-integrated communication:

- Text messaging
- Voice messages
- Photo/document sharing (automatically added to blockchain)
- Direct voice calls (within platform)

Phase 6: Listing Publication and Marketing

Step 1: Broker Optimizes Listing

- Reviews vehicle specifications form

- Adds marketing descriptions and highlights features
- Optimizes photos
- Confirms final listing price with seller (within ±5% of original - one-time adjustment only)

Step 2: Publication

- Broker publishes listing in CarDeal marketplace
- Listing becomes immediately visible to all buyers
- Listing includes "🔗 Blockchain Verified" badge
- Listing includes social media share button

Step 3: Marketing Tools

Free Marketing:

- Direct listing link sharing to any platform (WhatsApp, Twitter/X, Facebook, Telegram, etc.)

Premium Smart Sharing Service (Paid, from broker wallet, pay-per-use):

- AI-generated digital brochures (optimized for Twitter, image platforms)
- Professional short videos 15-30 seconds (for Snapchat, TikTok, Instagram Reels)
- Interactive stories (Instagram, Snapchat, WhatsApp)

Phase 7: Negotiation and Transaction

Broker Responsibilities

- Communicate with interested buyers
- Coordinate vehicle inspection at certified facilities
- Arrange inspection cost payment between seller and buyer
- Manage price negotiation
- Record all events on blockchain (viewings, inspections, offers)

Price Flexibility

- Seller can adjust price one time only within ±5% of original asking price
- This prevents price manipulation and maintains platform integrity
- Adjustment applies to seller's originally set price (not broker's proposal)
- Price changes are recorded on blockchain with timestamp

Phase 8: Transaction Completion

Option A: Full Escrow via CarDeal

Step 1: Buyer and seller agree on final price and vehicle passes inspection

Step 2: Broker creates transaction in system

Step 3: Buyer pays full amount via CarDeal (example for 80,000 SAR vehicle with 2% broker commission):

- Vehicle price: 80,000 SAR
- Broker commission: 1,600 SAR
- Platform fee: 400 SAR
- Total paid by buyer: 82,000 SAR

Step 4: All funds held in CarDeal's secure escrow account (Saudi bank partnership)

Step 5: CarDeal triggers TAMM API for ownership transfer:

- Verifies buyer's insurance
- Verifies no unpaid violations
- Processes legal ownership transfer
- Creates digital contract for both parties to sign
- Records transfer on blockchain with timestamp

Step 6: After TAMM confirms transfer + buyer confirms receipt:

- Seller receives: 80,000 SAR → directly to seller's IBAN account
- Broker receives: 1,600 SAR → to broker's wallet
- Platform retains: 400 SAR
- Transaction permanently recorded on blockchain

Step 7: Listing automatically removed from marketplace, blockchain record updated with "SOLD" status

Option B: Direct Transaction with Broker Facilitation

- Step 1: Broker arranges meeting between buyer and seller (in-person, online, or at dealership)

- Step 2: Broker coordinates vehicle delivery (especially if in different cities)
- Step 3: Parties complete transaction using Absher (for individual-to-individual transfer) or via dealership
- Step 4: CarDeal holds only broker commission in escrow (not full vehicle price)
- Step 5: After both parties confirm completion, commission released to broker + platform fee retained
- Step 6: Transaction recorded on blockchain with all details

Phase 9: Optional Ownership Transfer Service

Available with either transaction option:

Service Description: Broker facilitates and manages complete ownership transfer process:

- Coordination between buyer and seller
- Booking appointments at traffic department (if needed)
- Follow-up on transfer procedures
- Ensuring successful completion
- Processing all paperwork

Fees:

- Individual Brokers: 100-400 SAR (broker sets) + 50 SAR (platform) = 150-450 SAR total
- Dealerships: 400 SAR (fixed) + 100 SAR (platform) = 500 SAR total

Note: Completely optional - parties can handle transfer themselves via Absher at no cost

Phase 10: Reviews, Blockchain Finalization, and Data Recording

Mutual Reviews

Broker rates seller: Seriousness, cooperation, communication, punctuality, honesty

Seller rates broker: Response speed, communication quality, professionalism, keeping promises, sale speed

Reviews permanently recorded on blockchain and affect future reputation scores

Final Blockchain Update

- Transaction marked as "COMPLETED" on blockchain
- Final sale price recorded
- Ownership transfer details added
- All ratings and reviews added
- Vehicle history now shows complete transaction timeline
- New owner inherits complete blockchain history for future sale

System Recording (For Continuous Improvement)

- Complete transaction details archived
- Broker performance metrics updated (visible on blockchain)
- Seller transaction history updated
- AI pricing model retrained with actual sale data
- Platform services continuously optimized
- Blockchain analytics used to detect fraud patterns

Market Buyer Journey

Market buyers browse existing listings in the CarDeal marketplace and contact brokers for vehicles of interest.

Phase 1: Search and Browse

Step 1: Enter Marketplace

- Click "Browse Market" on CarDeal platform
- Complete comprehensive search form:
- - Vehicle specifications (make, model, year range, features)
- - Preferred city/cities or region or all Saudi Arabia
- - Price range (minimum and maximum)
- - Must be inspectable (conditional)
- Option to filter by "🔗 Blockchain Verified" vehicles only
- Option to view blockchain history preview for any listed vehicle

Step 2: View Search Results

- System displays all matching vehicles with comprehensive information
- Each listing shows:
- - High-quality photos (8 mandatory angles)
- - Complete specifications
- - Listed price
- - Broker information and level
- - Mojaz report summary
- - "🔗 Blockchain Verified" badge (if applicable)
- Quick blockchain history preview available:
- - Number of previous owners
- - Any recorded accidents
- - Verified mileage history progression
- - Service records count
- Hover over blockchain badge to see detailed verification status

Step 3: Interaction Options

- Add vehicles to favorites list for later review
- Share vehicle links via social media or messaging apps
- Compare multiple vehicles side-by-side
- View detailed blockchain history (before committing - public information)
- Download vehicle blockchain certificate as PDF
- See complete timeline of vehicle events on blockchain explorer

Phase 2: Contact Broker and Registration

Step 1: Initiate Communication

- Click "Contact Broker" button on desired vehicle listing
- System checks for existing account
- Displays broker information and blockchain reputation score

Step 2: Create Account (If Needed)

- If no account exists: Redirect to account creation
- Create new account or login to existing account
- Identity verification via Nafath (National Single Sign-On) required
- Blockchain wallet automatically created for buyer
- Initial reputation score: 0 (builds with transactions)

Phase 3: Pay Commitment Fee

Purpose: Ensure serious buyers only, protect brokers' time from window shoppers, filter out non-committed inquiries

Fee Structure (one-time per vehicle inquiry, non-refundable):

- 0.5% of listed vehicle price
- Minimum commitment fee: 199 SAR
- Example: 80,000 SAR vehicle = 400 SAR commitment fee
- Example: 30,000 SAR vehicle = 199 SAR (minimum applies)
- Fee recorded on blockchain as proof of serious interest

After Successful Payment:

- Direct communication channel opens with broker
- Broker receives immediate notification of serious buyer
- Full blockchain history unlocked for detailed review
- Buyer added to vehicle's blockchain "interested parties" record
- Buyer can see all blockchain-verified information:
- - Complete ownership history
- - All service records with verified mileage
- - Accident history (if any)
- - Inspection results

- - Insurance claims
- Transaction recorded on blockchain with timestamp

Phase 4: Communication Channels

Buyer has same communication options as seller:

Option A: Share Personal Contact Information

Share phone number, WhatsApp, or other direct contact method

Option B: Use Platform-Integrated Communication Tools

- Text messaging within platform
- Voice messages
- Photo and document sharing (automatically added to blockchain)
- Direct voice calls within platform
- Video calls (for vehicle virtual tours)
- All communications timestamped and can be recorded on blockchain for disputes

Phase 5: Inspection and Negotiation

Broker Coordination

- Broker obtains additional information from seller
- Verifies vehicle matches listing description and blockchain records
- Cross-references current condition with blockchain history
- Coordinates inspection process:
- - Arranges transport to certified inspection facility
- - Coordinates payment for inspection (buyer/seller agreement)
- - Ensures vehicle passes inspection
- - Reviews inspection report with buyer
- Inspection results automatically added to blockchain
- Current mileage verified and recorded on blockchain to prevent future fraud
- Photos from inspection added to blockchain record

Price Negotiation

- Buyer can propose different price based on:
- - Inspection results
- - Blockchain history findings

- - Market comparisons
- - Vehicle condition
- Broker mediates between buyer and seller
- Seller can adjust price once within ±5% of listed price
- Final price agreed by all parties
- All offers and counteroffers recorded on blockchain with timestamps
- Negotiation history becomes part of permanent vehicle record

Phase 6: Transaction Completion

Same two transaction options as seller journey:

Option A: Full Escrow via CarDeal

- Step 1: Buyer and seller agree on final price after inspection
- Step 2: Broker creates transaction in system
- Step 3: Buyer pays full amount via CarDeal (vehicle price + broker commission + platform fee)
- Step 4: All funds held in CarDeal's secure escrow account (Saudi bank partnership)
- Step 5: CarDeal triggers TAMM API for ownership transfer
- Step 6: System verifies buyer's insurance and checks for violations
- Step 7: Processes legal ownership transfer through TAMM
- Step 8: Creates digital contract for both parties to sign electronically
- Step 9: After TAMM confirms transfer + buyer confirms receipt, funds released
- Step 10: Transaction permanently recorded on blockchain with all details
- Step 11: Blockchain ownership transferred to buyer

Option B: Direct Transaction with Broker Facilitation

- Step 1: Broker arranges meeting (in-person, online, or at dealership)
- Step 2: Broker coordinates vehicle delivery if needed
- Step 3: Parties complete transaction using Absher or via dealership
- Step 4: CarDeal holds only broker commission in escrow
- Step 5: After both parties confirm completion, commission released
- Step 6: Transaction recorded on blockchain
- Step 7: Blockchain ownership transferred to buyer

Both Options Include Blockchain Recording:

- Final agreed price

- Payment timestamp
- Escrow deposit confirmation (if applicable)
- TAMM ownership transfer confirmation
- Buyer confirmation of receipt
- Commission distribution
- New ownership record with buyer as owner
- Complete transaction becomes part of vehicle's permanent history

Phase 7: Completion, Reviews, and Blockchain Ownership Transfer

Confirmation Steps

- Buyer confirms vehicle receipt and ownership transfer via platform button
- Broker confirms ownership transfer completion
- Verification from TAMM platform
- Notification sent to both parties
- Blockchain automatically updated with ownership change and timestamp

Automatic Safeguards

- System sends reminder after 7 days if buyer hasn't confirmed receipt
- Automatic fund release after 14 days with platform verification
- Prevents indefinite holding of funds
- All safeguard actions recorded on blockchain

Mutual Reviews (Recorded on Blockchain)

Broker rates buyer on:

- Seriousness and commitment
- Punctuality for meetings/inspections
- Cooperation and communication
- Respect and professionalism
- Decision-making speed

Buyer rates broker on:

- Response speed
- Communication quality
- Honesty and transparency
- Professionalism
- Coordination quality
- Knowledge of vehicle and market

Important: All reviews are permanently recorded on blockchain and directly affect future reputation scores. Cannot be deleted or modified.

Blockchain Ownership Transfer

- Vehicle blockchain record now shows new owner (buyer's hashed ID)
- Complete transaction history preserved and visible
- Buyer becomes custodian of vehicle's complete blockchain history
- Future sale will show buyer as "previous owner" with all transaction details
- Mileage progression tracking continues automatically
- New owner can add service records, inspections to blockchain
- Creates continuous, unbroken chain of custody
- Prevents future fraud attempts on vehicle history

Data Recording for Platform Optimization

- Complete transaction details archived in system
- Broker performance metrics updated on blockchain
- Buyer transaction history recorded on blockchain
- AI pricing model retrained with actual sale data
- Service quality metrics monitored
- User behavior patterns analyzed
- Blockchain analytics updated for fraud detection algorithms
- Market trend data aggregated

Request Buyer Journey

Request buyers specify their desired vehicle and delegate the search to professional brokers rather than browsing the marketplace themselves. This is ideal for buyers who:

- Know exactly what they want but don't have time to search
- Want access to vehicles not yet listed publicly
- Prefer professional assistance in finding the perfect match
- Want brokers to compete to find them the best deal

Phase 1: Create Detailed Vehicle Request

Step 1: Complete Comprehensive Request Form

1. Vehicle Specifications:

- Manufacturer / Model / Trim level
- Year range (from - to)
- Maximum acceptable mileage
- Transmission type (automatic, manual, or either)
- Engine specifications
- Other technical characteristics
- Preferred city/cities or region or all Saudi Arabia
- Optional broker services required:
- - Vehicle transport for inspection
- - Ownership transfer assistance
- - Delivery/shipping to buyer location
- Preference for blockchain-verified vehicles only (optional but recommended)

2. Acceptable Condition Assessment (for each component):

Buyer specifies acceptable condition for: Transmission, Engine, Chassis, Exterior Body

Options for each component:

- Excellent condition (ideal, no issues)
- Minor accidents acceptable (cosmetic damage only)

- Customer-specified preference (detailed description)

3. Budget Range:

- Minimum price willing to pay
- Maximum price (hard limit)
- AI provides market price estimate based on specifications

4. Request Duration and Priority Level:

- Urgent request: Maximum 7 days (higher broker priority)
- Regular request: Up to 30 days (standard timeline)

Step 2: Review Terms and Confirm

- Review all entered details for accuracy
- Agree to platform terms and conditions
- Understand commitment fee is non-refundable
- Confirm request creation
- Request automatically logged in system and recorded on blockchain

Phase 2: AI Analysis and Processing

CarDeal's AI engine performs intelligent analysis:

- Comprehensive specifications analysis
- Precise requirements understanding
- Priority identification (must-haves vs nice-to-haves)
- Market availability assessment based on historical data
- Price range verification against market reality
- Blockchain database search for matching vehicles
- AI prediction of likelihood to find matching vehicle
- Estimated time to fulfillment
- Recommended brokers based on specialization and past performance

Phase 3: Request Distribution to Qualified Brokers

Smart Distribution Mechanism

- Request sent to all qualified brokers (individuals and dealerships)
- Filtering criteria:
- - Same city/region as specified in request

- - Specialization match (if broker has specialty)
- - Minimum performance level (blocks low-performing brokers)
- - Blockchain reputation score above threshold
- Privacy protected: No request owner contact information visible to brokers yet
- Brokers see only:
- - Complete vehicle specifications
- - Acceptable condition criteria
- - Budget range
- - Timeframe (urgent or regular)
- - Blockchain verification preference
- Response deadline: 24 hours for brokers to indicate ability to fulfill
- IMPORTANT: Only one broker can work on request at a time (first-come-first-served from qualified brokers who respond)

Phase 4: Broker Selection and Payment

Step 1: Review List of Interested Brokers

Platform displays comprehensive comparison for each interested broker:

- Broker name and performance level (Beginner/Intermediate/Expert/Exceptional)
- Blockchain reputation score (publicly verifiable)
- Response time to request
- Customer ratings from blockchain (cannot be faked)
- Service Level Agreement (SLA) promises
- Average time to complete previous requests
- Commission percentage they charge
- Proposed selling price estimate
- Estimated days to find vehicle
- Number of blockchain-verified transactions completed
- Success rate for similar requests
- Specialization (if any)

Step 2: Reference Pricing Information

- AI agent price recommendation specific to Saudi market
- Average of all broker proposals
- Blockchain market data showing recent sales of similar vehicles
- Government Marjea valuation (if available)
- Helps buyer understand realistic pricing

Step 3: Select Preferred Broker

Buyer reviews all options and selects preferred broker based on: reputation, price estimate, timeline, commission, past performance

Phase 5: Account Creation and Verification

Same process as Market Buyer:

- Create account if needed (one-time)
- Verify identity via Nafath (National Single Sign-On)
- Blockchain wallet automatically created
- Initial reputation score: 0 (builds with transactions)

Phase 6: Pay Commitment Fee

Fee Structure (one-time, non-refundable):

Based on average expected vehicle price from request:

- For vehicles under 100,000 SAR: Fixed 500 SAR
- For vehicles 100,000 SAR and above: 0.5% of expected price
- Example: Looking for 150,000 SAR vehicle = 750 SAR commitment fee
- Example: Looking for 60,000 SAR vehicle = 500 SAR (fixed rate)

After Successful Payment:

- Direct communication channel opens with selected broker
- Broker receives immediate notification and full request details
- Request formally assigned to broker and recorded on blockchain
- Timer starts for broker to fulfill request within agreed timeframe
- Buyer can track progress in real-time
- Platform monitors broker performance

Phase 7: Communication Channels

Same flexible options as other user journeys:

Option A: Share personal contact information (phone, WhatsApp)

Option B: Use platform-integrated tools (text, voice messages, photo sharing, calls)

Phase 8: Active Search and Continuous Updates

Broker Search Responsibilities

Search broker's professional network:

- Contact known sellers in network
- Reach out to dealership inventory contacts
- Check specialized WhatsApp groups and networks
- Leverage personal connections in automotive industry

Search CarDeal marketplace:

- Browse existing listings for matches
- Identify potential matching vehicles
- Check blockchain history of candidates
- Verify condition matches request criteria
- Contact sellers of matching vehicles

Search external platforms:

- Monitor Haraj, Syarah, and other platforms
- Verify vehicle availability
- Check if vehicles have blockchain history (preference)
- Bring promising leads to CarDeal platform
- Ensure vehicles meet request criteria

Continuous Communication Updates:

- Send periodic progress updates to request owner (minimum every 2-3 days)
- Explain any challenges faced in search
- Provide market insights
- Maintain transparent communication
- Update request status on blockchain
- Record all search activities for accountability

Request Owner Role During Search

- Review offers provided by broker
- Accept or reject each offer with reasons
- Request additional information or photos
- Negotiate price within budget range
- Review blockchain history of proposed vehicles
- Provide feedback to help broker refine search
- Can request inspection of promising candidates

Phase 9: Extension and Automatic Request Transfer

After 7 Days Without Deal Completion:

Step 1: System Sends Extension Offer

Notification to buyer: "Your broker needs more time. Would you like to extend the search period?"

Extension Options:

- Buyer chooses extension duration: 3, 5, or 7 additional days
- One-time extension only (prevents unlimited delays)
- No additional cost for extension
- Extension decision recorded on blockchain
- Broker continues with extended deadline

Step 2A: If Extension Accepted

- Same broker continues working on request
- Extended deadline activated in system
- New countdown timer starts
- Logic: Broker may be close to completing deal and needs more time
- Broker gets one final chance to deliver

Step 2B: If Extension Rejected OR Extended Period Ends

- System automatically closes request with current broker
- Request owner sees list of all previously qualified brokers
- Owner chooses next broker from the list
- No additional fees charged to request owner
- New broker notified immediately and begins fresh search
- Previous broker's failure permanently recorded on blockchain

- Commission from failed broker goes to new broker if successful

Impact on Failed Broker (Blockchain-Recorded):

- Failure to deliver recorded permanently on blockchain
- Negatively affects blockchain reputation score
- Impacts future metrics:
- - Performance level may drop
- - Lower priority for future requests
- - Visible to all users in broker profile
- No commission earned from this request
- Multiple failures may result in platform restrictions

Phase 10: Transaction Completion

When suitable vehicle is found:

- Step 1: Broker presents matching vehicle to request owner
- Step 2: Request owner reviews vehicle details and blockchain history
- Step 3: Agreement reached on specific vehicle
- Step 4: Coordinate professional inspection at certified facility
- Step 5: Final price negotiation based on inspection results
- Step 6: Transaction processing using same two options as market buyer:
- - Option A: Full escrow via CarDeal, OR
- - Option B: Direct transaction with broker facilitation
- Step 7: All transaction steps recorded on blockchain
- Step 8: Vehicle blockchain history transferred to new owner (buyer)
- Step 9: Request marked as "FULFILLED" on blockchain

Phase 11: Optional Ownership Transfer Service

Same optional service as other journeys:

Individual Brokers: 150-450 SAR total

Dealerships: 500 SAR total

Phase 12: Reviews, Blockchain Finalization, and Data Recording

Mutual Reviews (Permanent on Blockchain)

Broker rates request buyer on: seriousness, communication, cooperation, decision-making

Request buyer rates broker on: search quality, communication, professionalism, fulfillment speed

Final Blockchain Updates

- Request marked as "COMPLETED" on blockchain
- Final vehicle match and price recorded
- Ownership transfer details added
- All ratings and reviews permanently stored
- Broker performance metrics updated
- Request buyer transaction history updated
- AI model retrained with request fulfillment data
- Platform analytics updated for future improvements

Comprehensive Data Recording

- Complete request and fulfillment details archived
- Broker performance metrics updated on blockchain
- Request buyer transaction history recorded
- Time-to-fulfillment analytics
- Search patterns and effectiveness analysis
- AI optimization for future request matching
- Market intelligence gathered from request patterns
- Blockchain analytics for fraud detection

Broker Journey

Brokers are the backbone of CarDeal platform, facilitating transactions between buyers and sellers. The platform supports two types of brokers with different business models and requirements.

Broker Types and Requirements

Type 1: Individual Brokers

Characteristics:

- No vehicle inventory of their own
- Work as facilitators and intermediaries
- Rely on marketing, networking, and negotiation skills
- Can work full-time or part-time
- Build reputation through blockchain-verified transactions

Platform Access: 100% FREE (No subscription fees, no listing fees, no hidden costs)

Registration Requirements:

- Identity verification (mandatory) via Nafath
- Option A: Personal registration with Saudi national ID or valid Iqama
- Option B: Freelance work document from Ministry of Human Resources (optional but adds credibility)
- Blockchain wallet created automatically for receiving commissions
- Digital signature capability for contracts
- Bank account (IBAN) for fund withdrawals

Accepted Nationalities: Saudi citizens and foreign residents with valid legal Iqama

4-Level Performance System (100% Blockchain-Verified)

All metrics calculated from tamper-proof blockchain records:

Level 1 - Beginner:

- Starting point for all new brokers
- All transactions automatically recorded on blockchain
- Visible as "Beginner" badge to users
- Full platform access to listings and requests
- Commission range: 0.5% - 2%

Level 2 - Intermediate:

- Requirements: 10+ blockchain-verified sales in 6 months + 4.0+ average rating
- Benefits:
- - Higher priority in request distribution
- - Better ranking in search results
- - "Intermediate" badge with verification checkmark
- - Access to performance analytics dashboard
- Commission range: 0.5% - 2.5%

Level 3 - Expert:

- Requirements: 20+ blockchain-verified sales in 4 months + 4.3+ rating + <2 hour response time + 90%+ completion rate
- Benefits:
- - Top priority for requests
- - Featured "Expert" badge (blue)
- - Advanced analytics and market insights
- - Priority customer support
- - Featured in "Expert Brokers" section
- Commission range: 0.5% - 2.5%

Level 4 - Exceptional:

- Requirements: 30+ blockchain-verified sales in 3 months + 4.5+ rating + <1 hour response + 95%+ completion rate
- Benefits:
- - Absolute highest priority

- - Golden "Exceptional" badge with star
- - Flexible commission up to 3%
- - Special monthly bonuses
- - Invitation to advisory board
- - Premium profile placement
- Commission range: 0.5% - 3%

🔗 **Important:** *All metrics are calculated from blockchain records - completely tamper-proof and publicly verifiable. No broker can fake their level or reputation.*

Type 2: Dealerships

Characteristics:

- Large vehicle inventory (own vehicles)
- Accept individual vehicles on consignment
- Platform serves as important additional sales channel
- Professional operations with staff
- Established business with physical location

Subscription Plans (Monthly billing with auto-renewal):

Plan	Capacity	Monthly Fee
Small Dealership	Up to 20 concurrent vehicles	500 SAR
Medium Dealership	Up to 60 concurrent vehicles	1,500 SAR
Large Dealership	Unlimited vehicles (60+)	2,500 SAR

🔗 **Blockchain Benefit:** All dealership vehicles are automatically blockchain-verified with complete history tracking

Broker Registration Process

Individual Broker Registration

- Step 1: Click "Register as Broker" on CarDeal platform

- Step 2: Choose registration type (Individual)
- Step 3: Verify identity via Nafath (National Single Sign-On)
- Step 4: Complete profile information:
- - Full name
- - Mobile number
- - Email address
- - City/region of operation
- - Specialization (if any - luxury cars, SUVs, sports cars, etc.)
- - Bank account (IBAN) for commission withdrawals
- Step 5: Digital wallet automatically created on blockchain
- Step 6: Blockchain identity generated (public key for reputation)
- Step 7: Agree to broker terms and conditions
- Step 8: Account activated immediately as "Beginner - Level 1"
- Step 9: Initial blockchain reputation score: 0 (builds with verified transactions)

Broker Dashboard Overview

Comprehensive dashboard with real-time blockchain-verified KPIs:

Key Performance Indicators (All from Blockchain)

1. Sales Metrics:

- Total sales completed (blockchain verified)
- Conversion rate (offers to completed sales)
- Average closing time per deal
- Gross Merchandise Value (GMV)
- Request fulfillment success rate
- Repeat customer rate

2. Blockchain Reputation:

- Public reputation score (0-5 stars)
- Total verified transactions on blockchain
- Complete ratings history (all visible)
- Fraud flags (if any - permanently visible)
- Verification badges earned
- Transaction success timeline graph

3. Financial Metrics:

- Monthly earnings (current month)
- Annual earnings (year-to-date)
- Average commission per deal
- Current wallet balance
- Pending earnings (in escrow)
- Withdrawal history

4. Level Progress:

- Current level and badge
- Progress bar to next level
- Sales remaining to level up
- Required average rating
- Response time performance
- Completion rate status
- Blockchain verification status

Dashboard Sections

Requests Section:

- Active Requests: Currently working on
- Incoming Requests: New opportunities to review
- Request History: Past requests with outcomes
- Performance analytics per request type

Listings Section:

- Active Listings: Currently published vehicles
- Draft Listings: In progress, not yet published
- Sold Listings: Completed transactions
- Listing performance analytics
- Blockchain history for each listing

Finance Section:

- Wallet Balance: Current available funds
- Pending Transactions: In escrow
- Transaction History: Complete log with blockchain links
- Withdrawal Options: Transfer to bank account
- Commission breakdown by listing/request

Ratings & Reviews (Blockchain):

- Overall rating with breakdown
- All reviews (cannot be deleted)
- Rating trends over time
- Response to reviews capability
- Public blockchain verification link

Analytics Section:

- Performance trends and insights

- Market analysis and pricing data
- Competition benchmarking
- AI-powered recommendations
- Blockchain analytics dashboard

Blockchain Section:

- Complete transaction history on blockchain
- Public reputation score details
- Verification badges and achievements
- Blockchain explorer links
- Proof of transaction certificates

Settings:

- Profile management
- Account preferences
- Privacy settings
- Notification preferences
- Bank account management
- Commission rate settings (within level limits)

Broker Blockchain Features

Automatic Blockchain Recording

- Every listing published by broker → Automatically recorded on blockchain
- Every offer, counteroffer, negotiation → Timestamped on blockchain
- Every completed sale → Updates broker's blockchain reputation immediately
- All commission payments → Recorded on blockchain with proof
- All ratings and reviews → Permanently stored on blockchain (cannot be deleted)
- Response times → Tracked and averaged on blockchain
- Completion rates → Calculated from blockchain data
- All blockchain data is publicly verifiable and tamper-proof

Blockchain Benefits for Brokers

- Tamper-Proof Reputation: Nobody can fake ratings, reviews, or transaction history

- Portable Reputation: Broker reputation exists on public blockchain, not locked in CarDeal
- Trust Building: Buyers see complete verified transaction history
- Dispute Resolution: Blockchain provides irrefutable evidence in case of disputes
- Performance Tracking: Real-time visibility into all metrics
- Future Opportunities: Blockchain reputation can be used on other platforms
- Premium Positioning: High blockchain reputation scores command higher commissions
- Verified Credentials: Blockchain proof of expertise and experience
- Fraud Prevention: System detects and flags suspicious patterns automatically

Blockchain Verification Badges

Brokers with strong blockchain reputation receive special badges automatically:

- 🔗 Blockchain Verified: All transactions recorded on blockchain (automatic for all)
- ⭐ Trusted Broker: 50+ verified transactions with 4.5+ rating
- 👑 Elite Broker: 100+ verified transactions with 4.8+ rating
- 💎 Master Broker: 200+ verified transactions with 4.9+ rating
- 🏆 Legendary Broker: 500+ verified transactions with 4.95+ rating

Important: *These badges are calculated automatically from blockchain data and cannot be manipulated, purchased, or faked in any way.*

Broker Income Potential

Individual brokers can earn significant income based on performance:

Example Calculations:

Broker Level	Sales/Month	Avg Vehicle Price	Commission %	Monthly Income
Beginner	2-3	70,000 SAR	1.5%	2,100 - 3,150 SAR
Intermediate	5-7	70,000 SAR	2%	7,000 - 9,800 SAR
Expert	10-15	80,000 SAR	2.5%	20,000 - 30,000 SAR
Exceptional	20-30	90,000 SAR	3%	54,000 - 81,000 SAR

Note: Top exceptional brokers can earn 80,000+ SAR per month through high volume and premium commissions. All earnings are blockchain-verified and transparent.

Conclusion: The Blockchain Advantage Across All Journeys

CarDeal's comprehensive integration of blockchain technology throughout all user journeys creates a fundamentally different and superior platform compared to traditional vehicle marketplaces.

Platform-Wide Blockchain Benefits

- Trust by Design: Every transaction, rating, and record is immutable and verifiable
- Fraud Prevention: Odometer fraud, fake ratings, and hidden histories become impossible
- Portable Reputation: Users build reputation on public blockchain, not locked in CarDeal platform
- Complete Transparency: Anyone can verify any claim on the platform
- Future-Proof Records: Blockchain records remain accessible and verifiable forever
- Network Effects: More blockchain data creates more value for all participants
- Competitive Moat: First comprehensive blockchain integration in Saudi Arabia vehicle market
- Government Partnership Potential: Blockchain infrastructure positions CarDeal as potential national registry
- Dispute Resolution: Irrefutable evidence from blockchain simplifies conflict resolution
- Data Integrity: AI pricing and analytics built on verified, tamper-proof data

User-Specific Blockchain Value

For Sellers:

- Vehicles with blockchain history sell 30-40% faster
- Command 10-15% price premium for transparency
- Build reputation for future transactions
- Protection against false buyer claims

For Buyers:

- Complete vehicle history verification before purchase
- Protection against odometer fraud and hidden damage
- Confidence in accurate vehicle valuations
- Portable history when reselling vehicle

For Brokers:

- Tamper-proof reputation that travels with them
- Higher trust = higher commissions and more business
- Protection against false accusations
- Verified track record attracts premium clients

The Complete CarDeal Ecosystem

Every user journey interconnects through the blockchain, creating a comprehensive ecosystem where:

- Sellers list vehicles → Automatic blockchain registration
- Brokers publish listings → Blockchain verification badge added
- Buyers browse market → See complete blockchain histories
- Transactions complete → Permanently recorded with all details
- Reviews posted → Immutable reputation building
- Data accumulates → AI improves, platform gets smarter
- Network grows → More data = more value for everyone
- Fraud attempts → Automatically detected and flagged
- Disputes arise → Blockchain provides definitive evidence
- Future sales → Complete history follows vehicle forever

Vision for the Future

CarDeal's blockchain registry is not just a feature—it's the foundation for becoming Saudi Arabia's national vehicle intelligence infrastructure. The platform is positioned to:

- Partner with government (TAMM, Ministry of Transport) as official registry
- Expand to all GCC countries with unified blockchain
- Integrate with insurance companies for instant risk assessment
- Connect with banks for real-time vehicle valuation for loans
- Provide market intelligence to automotive manufacturers
- Offer fraud detection services to law enforcement
- Create the most comprehensive vehicle data asset in the region
- Set the standard for blockchain-verified vehicle commerce globally

Every journey. Every transaction. Every record.
Verified on blockchain. Trusted forever.
